

Engineering Curves: Construction of Hypocycloid

Rolling Circle Method with Tangent & Normal

Gajavada Sanjeevkumar

September 8, 2026

Problem Statement

Given

A generating circle of diameter 50 mm rolls internally without slipping inside a directing circular arc of radius 85 mm for one revolution.

- Construct the hypocycloid.
- Draw a tangent and normal at a point 50 mm from the centre of the directing circle.
- Retain the construction geometry in the final drawing.

Calculated Data

$$R = 85 \text{ mm},$$

$$OC_0 = R - r = 85 - 25 = 60 \text{ mm},$$

$$\angle AOB = 360^\circ \frac{r}{R} = 360^\circ \frac{25}{85} = 105.882353^\circ,$$

$$\Delta\theta = \frac{105.882353^\circ}{12} = 8.823529^\circ,$$

$$r = \frac{50}{2} = 25 \text{ mm},$$

$$AC_0 = 25 \text{ mm},$$

Generating-circle division = 30° .

Step 1: Draw OA

$OA = 85 \text{ mm.}$

Step 2: Extend OA

Extend OA .

Step 3: Draw OB at 105.88°

$$\angle AOB = 105.88^\circ.$$

Step 4: Extend OB

Step 5: Draw the directing arc AB

Step 6: Locate C_0 and the generating circle

Step 7: Divide the generating circle into 12 equal parts

Step 7: Divide the generating circle into 12 equal parts

Step 7: Divide the generating circle into 12 equal parts

Step 7: Divide the generating circle into 12 equal parts

Step 7: Divide the generating circle into 12 equal parts

Step 7: Divide the generating circle into 12 equal parts

Step 7: Divide the generating circle into 12 equal parts

Step 7: Divide the generating circle into 12 equal parts

Step 7: Divide the generating circle into 12 equal parts

Step 7: Divide the generating circle into 12 equal parts

Step 7: Divide the generating circle into 12 equal parts

Step 7: Divide the generating circle into 12 equal parts

Step 8: Complete the generating-circle divisions

Step 9: Draw concentric construction arcs

Step 9: Draw concentric construction arcs

Step 9: Draw concentric construction arcs

Step 9: Draw concentric construction arcs

Step 9: Draw concentric construction arcs

Step 9: Draw concentric construction arcs

Step 9: Draw concentric construction arcs

Step 10: Draw the centre arc through C_0

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 11: Divide $\angle AOB$ into 12 equal parts

Step 12: Complete the angular divisions and centre points

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 13: Draw the cutting arc and locate P_i

Step 14: Draw the hypocycloid

Step 15: Select a point P at distance 50 mm from centre

Step 16: Draw the 25 mm radius to C_p

Step 17: Join C_p to O

Step 18: Mark M on the directing circle

Step 19: Draw the normal NN' through P

Step 20: Draw the tangent TT' perpendicular to NN'

Step 21: Show the right angle at P

Step 22: Final completed hypocycloid construction
